

KEM FLUID / 10

SPECIAL CHEMICAL FOR ALL KIND OF CLOSED CIRCUITS (COOLING SYSTEMS)

DESCRIPTION

KEM FLUID / 10, this is the last generation formula special designed for the optimum maintenance of internal tubes and tanks in closed cooling circuit equipments.

- It generates a micro-film over the circuit avoiding any possible corrosion.
- Stable to temperature changes.
- Avoiding frozen effects until -10 degree.
- Including an antibacterial to prevent water decomposition.

Produced in E.U.

HOW TO USE

KEM FLUID / 10 can be used directly on customer's cooling system as supplied or reduced **ONLY** with distilled water (Ask to your machinery supplier for % dissolution). Make sure that the tank/circuit where **KEM FLUID / 10** will be used is completely clean. Clean with diluted bleach if necessary before fill with **KEM FLUID / 10**. If refill is necessary use only **KEM FLUID / 10**, do not mix with other chemicals.

PRESENTATION

Sold in plastic tanks of 10 ltr.or 25ltr.
